Current Initiatives

Community Health Needs Assessment Alignment

The college is prioritizing the health of our community by strategically focusing our teaching, research, and service on the medical needs identified by the community through surveys conducted at local medical facilities.

The Tressa Nese and Helen Diskevich

Center of Geriatric Nursing Excellence (CGNE)

is a community of nurse educators, clinicians, and researchers whose leadership is actively improving health care for older adults in America.

MINDSTRONG/MINDBODYSTRONG is a cognitive behavioral skills building (CBSB) program that provides a theory-based approach to improve mental health, healthy lifestyle beliefs and behaviors, and job satisfaction in clinicians.

Nursing Research Network

The college has received funding from the Patient-Centered Outcomes Research Institute to develop networks for community-based nursing research throughout Pennsylvania.

Person-Centered Care Collaboration is a program that was established by the college and the Polisher Research Institute in North Wales, Pennsylvania. The program will expand on the college's current focus on research in aging and person-centered care — a model of elder care that seeks to improve quality of life by focusing on the patient's own lifestyle preferences.

THON Medication Administration

Under the supervision of nursing faculty, BSN students enrolled in NURS 306 (Nursing Care of Children and Adolescents) administer medications for the dancers in the IFC/Panhellenic Dance Marathon (THON) as part of their required clinical hours.

Age-Friendly Care, PA is a collaborative for age- and dementia-friendly care that is a dedicated group of diverse professionals from different backgrounds working together to improve the lives of older adults in Pennsylvania, with special attention to older adults living in rural parts of our state.

Two-Step Delirium Identification Tool

Supported by a grant from the National Institute on Aging, a four-year interprofessional project, "Researching Efficient Approaches to Delirium Identification," aims to improve the care of older adults by developing and testing a two-step bedside tool to detect delirium in hospitalized adults age 70 and older.

Sexual Assault Forensic Examination Telehealth (SAFE-T) Center

This project uses telehealth technology to enhance access to sexual assault forensic exams in underserved populations. Through live-examination videoconferencing with high-resolution image display, the SAFE-T Center improves the quality of services afforded to victims of assault in rural hospitals across Pennsylvania.
